

Amendments to the Claims:

Claims 9 - 13 and 17 - 19 have been canceled. Claims 1 - 8 and 14 - 16 are pending.

Listing of Claims:

1. (Currently Amended) A device for removing a composition and depilated hair u from the skin, the device comprising: a non-shaving head which in use is moved over the skin to effect removal of the composition; a handle having a curvature profile and a broadened end distal from the non-shaving head; and a joint between the head and the handle, permitting an articulation of the head about the handle.
2. (Previously presented) The device as claimed in claim 1, wherein there is a resistance force acting against articulation of the head, which resistance force increases as the articulation increases.
3. (Previously presented) The device as claimed in claim 1, wherein the head comprises an articulation about the handle through an angle in the range of 10 to 40°.
4. (Previously presented) The device as claimed in claim 3, wherein when the force, causing articulation of the head, is reduced or removed the head is able to recover a previous or original position.
5. (Previously presented) The device as claimed in claim 3, the device being unitary.
6. (Previously presented) The device as claimed in claim 5, the device being a one-part device comprising a plastic.
7. (Previously presented) The device as claimed in claim 3, wherein the handle is substantially rigid, the head is substantially rigid, and the joint is the only source of the articulation.

8. (Previously presented) The device as claimed in claim 3 wherein the joint is formed by a web of plastic material at the base of an upwardly open notch between the handle and the head.

12. (Canceled)

13. (Canceled)

14. (Previously presented) A device for removing a depilatory composition and depilated entrained hair from skin, the device comprising a translucent, integrally molded thermoplastic unit, the unit consisting essentially of:

a. a non-shaving head, the head comprising a planar surface comprising a flat top surface and a flat under surface, the planar surface ending in a single straight edge;

b. a handle having a curvature profile and a broadened end distal from the head; and

c. a single joint between the handle and the head providing limited articulation of the head with respect to the handle.

15. (Previously presented) The device as claimed in claim 14, wherein in the limited articulation of the head there is a resistance force acting against articulation of the head, which resistance force increases as the articulation increases.

16. (Previously presented) The device of claim 14, wherein the joint is formed by a web of plastic material at the base of an upwardly open notch between the handle and a curved surface of the head.
